...ment Mapping

Continued.

- Contact was located between Monte Cristo and Lynchburg gneiss as indicated on map. Lineament intersection at ROW 266 is also a strong site at edge of a ½ acre clearing accessible from above as well as from farm track indicated on map

ROW 254 is in open field across from stumps that are recently cut along field line to NE There are two drainages at intersection one from SW and one from SE Ledges of host rock map are just up hill from intersection - soil appears wet higher at intersection
